Overview

This refresher course is designed for managers and supervisors responsible for the storage, handling, and oversight of hazardous substances in the workplace. The programme reinforces essential knowledge and updates learners on current requirements for the safe management of hazardous substances, their potential impacts on people and the environment, and compliance with New Zealand health and safety legislation. Learners will review HSNO and GHS classification systems, risk management principles and the hierarchy of controls, safety data sheets (SDS), emergency planning and response, and monitoring requirements. The course supports leaders to maintain their due diligence obligations under the Health and Safety at Work Act 2015 and to confidently supervise workers who use or work around hazardous substances.

Course Content

- Explain how hazardous substances are classified under HSNO and GHS systems and interpret hazard information.
- Identify the potential acute and chronic health effects and environmental impacts of hazardous substances.
- Apply the hierarchy of controls to manage risks associated with hazardous substances in the workplace.
- Interpret Safety Data Sheets (SDS) to determine safe handling, storage, emergency response, and disposal requirements.

Unit Standard

UNIT 31290	Demonstrate knowledge of the safe management and potential adverse effects of hazardous substances in the workplace.
