Verification of Competency / VOC Reach Stacker

SAFETY'N ACTION AXIOM TRAINING

VOC assessments are delivered one-on-one with a trainer, allowing operators to be assessed individually without taking entire teams off-site. This flexible approach means staff can rotate through the assessment while maintaining normal operations.

Overview

VOC field assessments are designed to facilitate the ongoing assessment of trained individuals in their workplace environment. Completing these competency assessments ensures that correct procedures are being used in the workplace.

Competency Assessed

The Verification of Competency (VOC) for Reach Stacker assesses an operator's ability to safely and effectively operate a reach stacker in a workplace environment. Operators are evaluated on their understanding of key safety requirements, including hazard identification, load stability, and safe handling practices when lifting, transporting, and stacking containers. This includes demonstrating correct procedures for pre-operational checks, safe machine operation, and maintaining control of loads during movement and placement. The VOC focuses on verifying that operators can apply correct techniques when handling heavy loads, including awareness of load limits, centre of gravity, and environmental factors that may impact safe operation. Operators must also demonstrate safe manoeuvring, positioning, and coordination within busy operational areas. This assessment confirms that operators are applying their existing knowledge and experience in line with workplace procedures and best practice, ensuring continued competency over time.

Outcome

Upon completion, you will receive a VOC report outlining each trainee's areas of competency and any areas that may require further training or additional VOC checks in the future.
