It's designed for workers who are new to crane operation and want to gain practical experience before completing a full certification course. Participants will learn how to identify key parts of the crane, understand lifting principles, set up for safe operation, and manage simple lifts under supervision.

By the end of the course, learners will have the confidence to carry out basic lifting tasks safely, recognise potential hazards, and follow correct communication and safety procedures. This course provides a solid foundation before progressing to a unit-standard-based qualification.
