Overview

The In-Cab Small Trailer Verification of Competency (VOC) confirms that drivers can safely operate a vehicle and small trailer combination in line with road safety requirements. This assessment is carried out in real-world conditions by a qualified assessor and is designed to ensure drivers remain compliant and competent in their day-to-day operations.

Competency Assessed

Pre-start: Check park brake, neutral, warning lights, gauges, oil pressure, and seatbelt.Moving off: Accelerate smoothly in the correct gear at low revs, with no clutch shudder or jerking. In motion: Change gears correctly and progressively, and use proper technique on hill descents and corners. Driving practices: Monitor instruments, follow road rules, use mirrors and shoulder checks, watch for hazards, brake safely, and manage speed. Reversing: Position correctly, check the area is clear, and keep speed low with good mirror use and clutch control. Parking & shutdown: Park safely, apply the park brake, select neutral, avoid revving, and let the turbo cool down. Coupling & uncoupling: Align correctly, apply park brakes, connect or disconnect airlines and electrics, and use landing legs and wheel chocks. Do a tug test and check for leaks or damage.

Outcome

After the assessment, you'll receive a VOC report showing each driver's competencies and any areas needing further training or reassessment. The assessment confirms drivers can carry out all key procedures for operating a vehicle with a small trailer, within size, weight, and speed limits. Drivers will also show correct handling, safe driving, and hazard awareness so the vehicle and trailer are operated safely and efficiently in all conditions.
