At your own site or workplace

Overview

This Verification of Competency (VOC) confirms that operators of telescopic toplifts can safely and effectively handle container movements and related lifting tasks. The assessment ensures compliance with workplace and safety standards while verifying operators are current in their knowledge and practical skills.

Competency Assessed

Operators will be assessed on their knowledge of equipment, including load ratings, controls, attachments, PPE, and safe operating conditions, as well as their pre-start inspection, covering entry and seatbelt checks, control positions, lifting gear, and SOP compliance. The practical assessment covers safe toplift operation: travelling forward and reversing with load awareness, picking up, carrying, and placing 20ft and 40ft containers, stacking and de-stacking, non-container lifts, loading and unloading trucks without damage, parking and shutdown procedures, and hazard reporting with environmental awareness. Operators must perform these tasks consistently and safely to show their unit standards remain current and applied in the workplace.

Outcome

On successful completion of this Verification of Competency, operators will receive a report outlining their level of competency across each assessed area. The report confirms whether the operator is competent, requires supervision, or requires further training. This ensures toplift operators can safely and effectively carry out container handling, lifting gear checks, and hazard management in compliance with workplace and safety standards.
